

IT ALL STARTED WITH AN IDEA:
WHY PAY FOR INACTIVE
INGREDIENTS?

Now from the company that brought you the world's most concentrated wvliquid stabilized bromine comes the most concentrated tablet form of the field-proven biocide DBNPA. The tablets are formulated with an unprecedented 95.6% active ingredient, so you don't pay extra for fillers.

EnviroBrom® slow release DBNPA tablets deliver an EPA registered biocide for controlling algae, bacteria, and slime in:

Recirculating
cooling water
systems

Basement sumps
and swamp
coolers

Air conditioning
pans

Lined reservoirs
and decorative
fountains

Air washing
systems

RO membranes
and metal working
fluids

ADVANTAGES

- Ideal for use in low volume cooling water systems.
- 95.6% active DBNPA in 100 g tablet.
- Enhanced performance over the leading competitor's 200 g tablet.
- One tablet treats 500 - 1000 gallons of water for up to three weeks.
- Non-swelling - suitable for use in bypass feeder or sealed floater.
- High tensile strength tablets means no splintering or dusting.

EFFECTIVE

The tablets contain DBNPA (2,2-dibromo-3-nitropropionamide), a highly effective and wide spectrum biocide that has been used successfully in the field for years. Enviro Tech's slow dissolving biocide tablets are intended for use in smaller cooling tower installations and allow for less frequent visits by the service company. When time is money, the less time spent monitoring the cooling water is more money in your pocket.

SAFE & EASY

DBNPA is a very effective biocide, but can be difficult to handle safely. It isn't cost-effective to run complex closed and metered biocide systems for small cooling towers, so safety and ease of handling is of primary concern. Enviro Tech's slow dissolving biocide tablets come individually wrapped in a water-soluble bag. The breakthrough formulation regulates the rate at which the tablets dissolve, allowing service intervals of about a month.

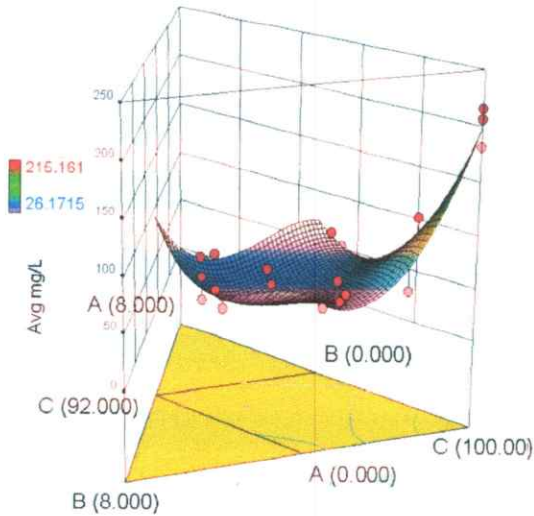

HANDLING AND STORAGE

Store in the original, tightly-closed containers, in dry, dark and cool areas, away from energy sources. Even though product is individually wrapped in a protective pouch, observe safety practices such as chemical resistant gloves, eye protection, boots, and protective clothing.

SHIPPING AND TRANSPORT

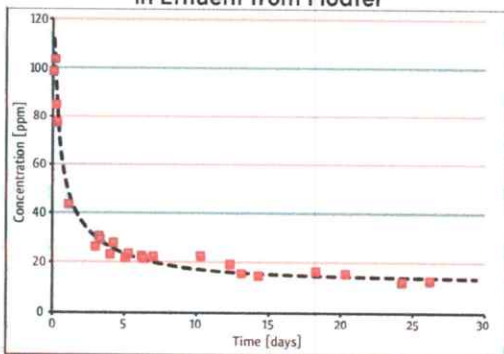

EnviroBrom® Tabs are available in 5.5 lb pails containing 25 tablets. Boxes come with four pails. EnviroBrom® Tabs ship as non-hazardous when shipped domestically via ground.

DESIGN • DEVELOP • TEST

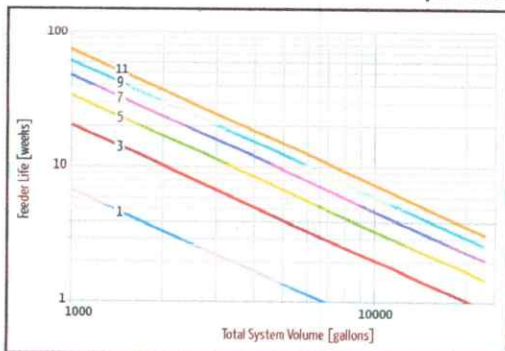

Enviro Tech's slow dissolving DBNPA tablets were designed and analyzed using specialized statistical software to determine the optimal formulation. From this information, the **tablets were "tuned" to provide an optimal balance** between long life and proper biocide dosing.

DBNPA Concentration Over Time in Effluent from Floater

The tablets provide **slow, consistent release for many weeks.**

Dosing Characteristics — Each line represents a different initial amount of tablets in pounds

Recommended dosing is **one tablet per 500 gallons** of system capacity. Feeders can also be charged with additional tablets and set to dose automatically to increase the service interval further
