

POLAR ELITE 100

COOLING TOWER SCALE & CORROSION INHIBITOR
Product Bulletin

- Unique Blend of All-Organic Scale and Corrosion Inhibitors
- Superior polymer blend for wide range of LSI
- Halogen Stability Allows for Microbial Control with Economical Oxidizing Biocide
- Simple and Accurate Tracer for Easy Control of Residuals
- Provides Corrosion Inhibition for both Ferrous and Yellow-Metal Systems
- Single Dry Bottle Blend-Minimizes Space Requirements
- Minimizes Biocide Cost-Halogen Stability Allows MB Control with Economical Oxidizing Agents

POLAR ELITE 100 is a blend of technologically superior cooling water scale and corrosion inhibitors with polymeric dispersants. This concentrated product is formulated for protection of yellow metal and multi-metal systems. The dispersants in Polar Elite 100 are stable in the presence of halogens, thus maximizing protection in systems using chlorine and bromine as oxidizing biocides.

Recommended Dosages: typical dosage range is 20-35 ppm of product in the recirculating water.

Water Quality	Dosage	PTSA
LSI 2.0	25 ppm product	100 ppb of PTSA

General Properties: Specific properties are listed on the Safety Data Sheet, available through your Blue Ocean Representative.

Packaging: Case of 4 bottles, 1 gallon each @ 44 pounds per case.

Storage: Protect from freezing. Read and follow SDS.

Safety Precautions: Safety Data Sheet is available through your Blue Ocean representative
